The status of the parent application must be updated at the beginning of the specification.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-42, drawn to a blend of polyester and PC, classified in class 525, subclass 439.
- II. Claims 43-45, drawn to polyester, classified in class 528, subclass 181.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the polyester of claim 1 does not require a particular viscosity or cyclohexanedimethanol. The subcombination has a separate utility such as a fiber or molding resin without inclusion of PC.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to B.J. Boshears on 3/21/05 to request an oral election to the above restriction requirement, but did not result in an election being made.
